

| Line Number | Error                                                 | Error Type           | Error Correction                      |
|-------------|-------------------------------------------------------|----------------------|---------------------------------------|
| 15          | Function add called with 1 argument instead of 2      | Syntax/Function Call | Call add(num1, num2)                  |
| 21          | Function average called with 2 arguments instead of 3 | Syntax/Function Call | Call average(70,80, value)            |
| 47          | factorial base case returns 0                         | Logical Error        | Return 1 when n == 0                  |
| 56          | swap does not swap values (pass by value)             | Logical Error        | Use pointers or return swapped values |
| 66          | maximum returns wrong value                           | Logical Error        | Return a if a > b, else b             |
| 76          | fibonacci recursive call incorrect                    | Logical Error        | Use fibonacci(n-1) + fibonacci(n-2)   |
| 34          | Undefined function calculateGrade                     | Compilation Error    | Declare and define calculateGrade     |
| 39          | Undefined function circleArea                         | Compilation Error    | Declare and define circleArea         |
| 44          | Undefined function sumArray                           | Compilation Error    | Declare and define sumArray           |
| 48          | Undefined function displayResult                      | Compilation Error    | Declare and define displayResult      |
| 103         | simpleInterest missing return value                   | Syntax Error         | Return si                             |
| 120         | reverseNumber missing return statement                | Syntax Error         | Return rev                            |
| 109         | power loop incorrect range                            | Logical Error        | Loop should run i <= exp              |
| 159         | cube function incorrect implementation                | Logical Error        | Return n*n*n                          |
| 134         | printArray out-of-bounds loop                         | Runtime Error        | Use i < size                          |
| 125         | isPrime returns incorrect result                      | Logical Error        | Return 0 if divisible, else 1         |
